

Coverstock Headliner Foam Interior

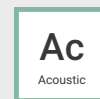

StrataPlush™ coverstock headliner foams are uniquely designed for a wide range of highly-efficient processes. Formulations are specifically engineered for both wet and dry headliner forming, as well as various other soft-trim applications. Woodbridge StrataPlush headliner flexible foam family solutions are engineered to deliver the highly specialized needs of today's laminate foam production environments.

StrataPlush products are available in flat and round blocks and polyether and polyester foam grades. Our headliner foaming processes are finely tuned for density, firmness, cell size, cell structure, and airflow to provide outstanding performance for our customers.

Applications

- + Headliners
- + Sun visors
- + Door trim
- + Interior systems

RELATED SOLUTIONS

Coverstock Headliner Foam Interior

Advantages

- + 50" (1.27M) diameter round block.
